

Geophysical survey

Fibron's experienced team of design engineers and technicians has the knowledge and expertise to design and manufacture a variety of different umbilicals and cables for the geophysical survey sector.

As a key supplier to the seismic industry since the early 2000's, Fibron has developed a unique and extensive portfolio of industry-specific products, including a range of tow cables and several different fairing systems.

Applications

- Armoured lead-in cables
- Fibre-reinforced tow cables
- Airgun umbilicals
- Electro-magnetic source umbilicals
- Life-of-field ocean bottom cables
- Deck cables
- Fairing systems
- Terminations
- Tall buoy cables
- Fibre-optic cables
- Permanent array cables
