

Offshore renewables

As the energy transition gathers momentum, the demand for offshore renewable energy is growing.

Fibron is widely recognised for its expertise in designing and manufacturing static and dynamic cables that can withstand the rigours of the offshore environment. Whether for floating offshore wind farms, tidal energy, wave energy or floating solar installations, Fibron can bring a wealth of experience to any project. What's more, because we have a particular strength in developing prototypes, we are ideally placed to help with the early stages of any such project.

Applications

- Dynamic cables
- Static cables
- Installation and maintenance equipment
- Wind turbines
- Tide energy
- Wave energy
- Floating solar
- Electric boat charging stations
